

PHP Language Extension Library

ADD STATIC ANALYSIS TO DEV PROCESS

**CREATE CUSTOM RULES TO EMULATE
NEW LANGUAGE FEATURES**

One of many examples...

```
class TextMessageSender  
{
```

```
    // This method can only be called by  
    // TextMessageQueueProcessor
```

```
public function sendMessage()  
{  
    // some code  
}
```

```
}
```

Custom Static Analysis Rules

+

Attributes

=

New Language Features

```
class TextMessageSender
{
    #[Friend(TextMessageQueueProcessor::class)]
    public function sendMessage()
    {
        // some code
    }
}
```

DEFINITION

<https://github.com/DaveLiddament/php-language-extensions>

<https://github.com/DaveLiddament/phpstan-php-language-extensions>

```
class Person
```

```
{
```

```
    #[Friend(PersonBuilder::class)]
```

```
public function __construct()
```

```
{
```

```
}
```

```
}
```

```
class DiscountCalculator  
{  
    # [NamespaceVisibility]  
    public function calculate(): int  
    {  
    }  
  
}
```

```
class Person
```

```
{
```

```
    #[TestTag]
```

```
    public function setId(int $id)
```

```
    {
```

```
    }
```

```
}
```

```
# [Sealed(Success::class, Failure::class)]  
abstract class Result  
{  
}
```

#[InjectableVersion]

interface class PersonRepository {...}

**class DoctrinePersonRepository
implements PersonRepository {...}**

**class PersonCreator {
public function __construct(
 PersonRepository \$personRepository,
) {...}
}**

Thank you for listening
